Process Dynamics And Control Bequette

B. Wayne Bequette. Chemical Process Dynamics and Control. The purpose of this course is to introduce undergraduate students to the theory and practice of chemical process modeling and control. The emphasis is on a model-based approach to control system design. The SIMULINK simulation package (based on MATLAB) is used for dynamic process simulation and control system development.

Chemical Process Dynamics and Control - Bequette

An understanding of the dynamic behavior of chemical processes is important from both process design and process control perspectives. It is easy to design a chemical process, based on steady-state considerations, which is practically uncontrollable when the process dynamics are considered.
