Reteaching 7-3 Binomial Radical Expressions • Conjugates, such as  $a + b$  and  $a - b$ , differ only in the sign of the second term. If  $a$  and  $b$  are rational numbers, then the product of conjugates produce a rational number:  $(a + b)(a - b) = a^2 - b^2$ . • You can use the conjugate of a radical denominator to rationalize the denominator. Examples Multiply  $\frac{1}{\sqrt{2}}$ . These are conjugates.
