Purplemath. You've already learned the basic trig graphs But just as you could make the basic quadratic, $y = x^2$, more complicated, such as $y = -(x + 5)^2 - 3$, so also trig graphs can be made more complicated.We can transform and translate trig functions, just like you transformed and translated other functions in algebra.. Let's start with the basic sine function, $f(t) = \sin(t)$.

Instructions. Using the pull-down menus, select values for a, b, c, and d. The graph of the function will be updated automatically. Selecting the "show base function" option causes the basic function (with $a = b = 1$ and $c = d = 0$) to be graphed in red. The function with other values for the parameters appears in green.
